

Curriculum at Daybreak Academy

Here at Daybreak Academy, we take pride in our whole-child learning approach. We have combined multiple learning approaches and techniques to create high-quality, hands-on learning experiences for every student. Research proves that children learn best through active engagement as this creates strong connections in the developing brain. This is why we have embraced and taken the best aspects of various teaching approaches to create an integrated, active, hands-on, and individualized curriculum method.

We use an inquiry driven planning method with an academic push in which our teachers use reflective observations to guide intentional planning. Our goal is to interest, excite, and intrigue our young learners to motivate them to be active in their own learning.

Why This Teaching Method Works:

- Students participate in their own learning and aren't expected to sit at a desk all day
- Teachers create personalized lessons based on students' interests and core learning standards
- Students are exposed to all learning domains resulting in a well-rounded education
- Creates a foundation of appreciation and love of learning
- Classroom Environments are set-up to support and encourage independent learning
- Assessments are done through observation
